Toutes les valeurs de la première ligne sont "très grandes" (> 16 000).

Remarque :   Les quantiles d'ordre 0.005 se déduisent des quantiles d'ordre 0.995 : $f^{(\nu_1, \nu_2)}_{(0.005)} = \dfrac{1}{f^{(\nu_2, \nu_1)}_{(0.995)}}$

Loi de Fisher $F(\nu_1, \nu_2)$

$P(X \le f) = 0,995$

Lecture des quantiles f

$p = 0,995$
